

Light Barrier Counter

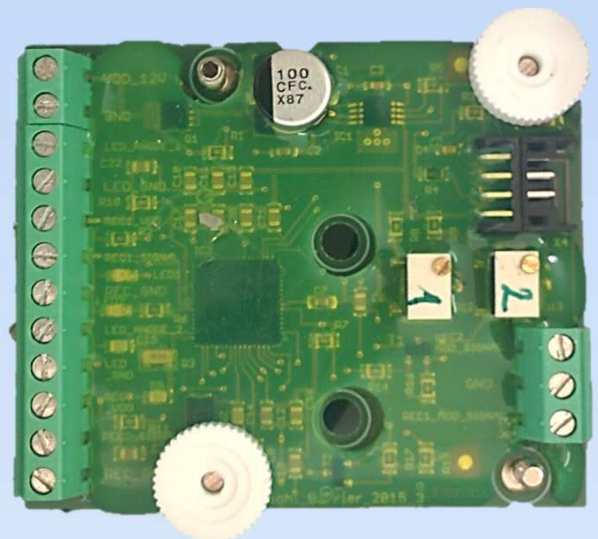

Automating the recording and manipulation of animal behavior

Peter Loës & Peter Skripsky
Department Kempenaers

APPLICATIONS OF THE LIGHT BARRIER COUNTER:

- Automated counter of any animal that can break the light barrier
- Assessing numbers of individuals at areas of interests such as bat roosts
- Presence/absence of individuals before undergoing more in-depth experiments
- Light barriers can be arranged in various ways to match the environment (e.g. size of roost or den opening)
